

Corrosive-resistant material

Corrosive-resistant materials (resilient)

Install corrosion-resistant door and window hardware so these do not need to be repaired or replaced following a flood event.

Using corrosion-resistant materials in flood-prone areas can offer several benefits, including:

- » **Increased durability:** Corrosive-resilient materials are designed to withstand harsh environmental conditions, including exposure to floodwaters, without degrading or deteriorating. This means that they can maintain their strength and integrity even after prolonged exposure to water.
- » **Reduced maintenance costs:** Because these materials are more durable and resistant to corrosion, they require less maintenance over time. This can result in cost savings for property owners in flood-prone areas.
- » **Longer lifespan:** Corrosive-resilient materials have a longer lifespan, which means they can reduce the frequency of replacements and repairs. This, in turn, reduces the amount of waste generated and resources needed for manufacturing and transportation of materials, contributing to a more sustainable solution.

Corrosive-resistant materials example

This is an example of corrosive-resistant door knobs.
