

Polished concrete

Polished concrete (resilient)

Polished concrete can be a great flooring option for flood-prone homes due to its durability, versatility, and resistance to water damage.

Here are some benefits of using polished concrete in homes:

- » **Waterproof:** Polished concrete is naturally water-resistant, which means it can often withstand floods and water damage without warping, buckling, or deteriorating.
- » **Low maintenance:** Polished concrete floors are easy to clean and maintain. They do not require regular waxing or polishing and can be easily mopped or swept to keep them looking clean and shiny.
- » **Durable:** Polished concrete is one of the most durable flooring options available. It can withstand heavy foot traffic, spills, and other wear and tear without showing signs of damage.
- » **Cost-effective:** Compared to other flooring options, polished concrete is relatively cost-effective. It is also long-lasting, which means it can be a worthwhile investment in the long run.
- » **Aesthetic appeal:** Polished concrete floors can be very visually appealing, especially when they are properly sealed and polished. They can be customised with different colours and textures to create a unique and attractive look.

Polished concrete example

This is an example of polished concrete.
